

Kiseki Blue N.S.

The Kiseki Blue N.S. is the first “New Style” Kiseki cartridge ever. The typical, but shorter, Kiseki body is machined out of solid aluminium, the motor is built from best available parts today. Two years of experimenting, testing all possible choices of materials and techniques to result in a better new Kiseki Blue. A Kiseki Blue which surpasses the results of the original Kiseki Blue from the 80’s and of the more recent Kiseki Blue N.O.S. Only then we felt we had a reason to produce this Kiseki Blue N.S.

It will still be available in limited quantities, but we try to supply the world in such a way that once it is available in your country, there should not be a shortage afterwards. Only if enough products are available to us, we will explore new areas. Elsewhere on this website you can see where this new Kiseki Blue N.S. will become available, where you have to travel for an opportunity to listen to the first Kiseki “New Style” cartridge.

MC Kiseki Blue N.S. – SPECIFICATIONS

Body: Aluminum alloy, 25mm long

Cantilever: Solid Boron Rod: 0.28 mm diameter

Stylus: 0,12 x 0,12 Nude line-contact diamond, mirror polished

Stylus tip radius: 5 x 120 µm

Vertical Tracking Angle (VTA): 20 degrees

Coilbody: pure iron

Weight: 8 grams

Output voltage: 0.44 mV at 5 cm/s

Internal impedance: 40 ohms

Frequency response: 20 – 25.000 Hz ± 1 dB

Channel balance: 0.4 dB

Channel Separation: 35 dB at 1 kHz

Tracking ability at 315 Hz at a tracking force of 2.4 grams: 80 µm

Dynamic Compliance: 16 µm/mN
